

Week 3 Hints:

9. Why is this clue numbered differently? The numbers we gave you in the colored boxes obviously didn't help solve the puzzle. Do they make more sense if you look at the instruction sheet?

10. Balancing the chemical reaction, you'll be frustrated to find that two answers exist. Did you head to Post 7?

11. Try saying it out loud with another person in the room.

12. Translate that binary to find the "clue". You don't have to walk too far for this. Look at the property on the map. Is there a binary trail you can take?
